Thank you all for making time to discuss a go-forward strategy to "re-boot" the Cherokee parking structure and transform it into an asset for the middle-section of the Boulevard. The hope is to see this strategically-placed piece of infrastructure as an economic development tool, and to improve the visitor experience and provide a safe, convenient and affordable parking option. How's that for a vision?

And thank you to Fran Offenhauser for initiating some interesting research into the current state of that structure! We will look forward to your presentation.

We really need the CD-13 staff in the room, and this appears to be the best option – so I hope it will work for everyone to come downtown.

We will reach out with parking instructions later.

Kerry
